Four Good Reasons To Drink Kangen Water®

Increase Hydration

The process of ionization reduces the size of the water cluster by two-thirds and creates a hexagonal shape. Smaller, hexagonal water clusters easily hydrate the cells, enhancing waste removal.

Balance Body pH

Kangen Water raises tap water pH by ionizing or splitting the water molecule (H₂O) resulting in the ions H⁺ (hydrogen with a positive electrical charge), and OH⁻ (hydroxyl with a negative electrical charge), as well as ionic alkaline minerals.

Increase Blood Oxygenation

Strong, fresh Kangen Water contains an abundance of hydroxyl ions (OH⁻) which donate free electrons to unstable oxygen free radicals, resulting in stable oxygen molecules. According to experts, drinking Kangen Water regularly will increase the amount of dissolved oxygen in the blood.

Neutralize Free Radicals

Kangen Water provides extra electrons that neutralize destructive free radicals circulating throughout the body. Kangen Water carries a high negative ORP (Oxidation-Reduction Potential) when it is first produced, making it a potent anti-oxidant.
